

A2 Multitrac

with A2 Welding Controller PEI

The universal welding automat for better welding economy

The A2 Multitrac is the result of years of experience and the latest technology. The A2 Multitrac is designed to put your welding operation on the right track to increase productivity and quality, whether you work with SAW single or twin or with MIG/MAG welding.

The compact and efficient design makes it easy to move the A2 Multitrac from one place to another and between different welding workpieces.

The heavy dimensioned feed units secure an even and stable wire feed, a pre-requisite for top quality, homogeneous welding.

The carriage of the tractor is four-wheel driven which ensures a constant and stable welding speed even in inclined positions. The carriage is equipped with a handle to disengage the gear and the A2 Multitrac can then easily be pushed to another place.

The A2 Multitrac for Submerged Arc Welding can be delivered in two versions, for single or twin wire. When using twin wire the deposit rate is increased by 30-40%. Joint gaps can easily be bridged and there is less risk for burn through. When cladding, the A2 Multitrac with twin wire can easily be set up for low penetration.

Accessories

To be able to increase the profitability, there are a number of accessories: specially developed idling rollers, guide wheel bogies

in V-joint keeps the tractor on track along the joint. The guide wheel bogies can also be used for inside tube welding.

V-guide wheels for guide rail when the welding workpiece lacks a guiding edge when an I-joint is to be welded. Pilot lamps with a light bulb or a laser diode, which projects a luminous spot in the joint.

A2 welding controller

The control equipment is very easy to use with a minimum of training. The welding parameters are adjusted by turning knobs and the actual parameters are shown on the digital displays. With the controller the user can choose between different start methods, direct start or scratch start. The burnback time is also easily adjustable to optimise the stops for different size of wire.

Technical data

		Single SAW	Twin SAW	GMAW
Wire dimensions (mm)	Steel	1.6-4.0	2 x 1.2-2.5	0.8-1.6
	Stainless	1.6-4.0	2 x 1.2-2.5	0.8-1.6
	Cored wire	1.6-4.0	-	1.2-2.4
	Aluminium	-	-	1.2-1.5
Max wire feed speed (m/min)		9	9	16
Electrode weight (kg)		30	2 x 15	30
Flux volume (l)		6	6	-
Weight excl. wire and flux (kg)		47	47	43
Permissible load 100% (A)		800	800	600
Control voltage (V)		42	42	42
Travel speed (m/min)		0.1-1.7	0.1-1.7	0.1-1.7
Linear slides setting length (mm)		90	90	90
Rotary slide setting angle (°)		360	360	360
